## **Instructions for Mum/Mom flower box frame**

*Please read through before starting.*

### **Important!**

The main project requires a 20cm (8" x 8") box frame. I created it this way as all the components will print onto A4 paper, which the majority of people have.

There are many more flower parts included than you will need in the project. I wanted to allow for mistakes and freedom to 'make it your own' when assembling.

I suggest starting with enough components to make 5 of each flower and then cutting more if you feel you need them.

### **You will need:**

Scalpel & Cutting mat

Your preferred white and different coloured papers

Acid free craft glue (pritt stick will work)

A square 8 x 8 box frame

## Instructions

1. Cut out the main paper cut part first. You can chose to do this in white or in colour using the appropriate template It's helpful to have this part already done when arranging the flowers as you can see better how they will show through in the finished frame.
2. You can either print the flower templates on coloured paper to cut out, or you can trace the templates onto tracing/baking paper and transfer to coloured paper the old-fashioned way!
3. Once I've cut my flower parts I bend up the edges of the petals with my thumb and forefinger and score 'veins' into the leaves by folding and manipulating them - you really don't need to be precious about it. The flower centres I bend the 'stamens' upwards.
4. I spend quite a while arranging the flowers, until they show through the papercut the way I want, before I glue them onto the back of the frame. You could also glue them onto backing paper.
5. I then fix the papercut at the front of the frame, put in the spacer and then the backing of flowers and close the frame.
